MENEGATTI COPPER RECOVERY MIX

Mixed material for copper and other metal recovery

10-14% Copper Content

Equivalent to 100-140 kg of contained copper
per metric tonne of supplied material.

Mixed material for processors equipped to separate and recover copper, aluminum, stainless steel and other metals from a predominantly non-metallic fraction.

ACTUAL MATERIAL

COMPONENT DETAIL

MIXED FRACTION

Real photos supplied 15 Oct 2026. Detail views have no measurement scale.

INDICATIVE COMPOSITION

Percentage of total supplied weight

Copper	**10-14%**
Total metals, including copper	**approximately 20-25%**
Plastics and other non-metallic residues	**approximately 75-80%**

Composition figures are seller-provided indications. Lot-specific composition and supporting test information must be confirmed. Contained metal is not equivalent to recoverable output; actual recovery depends on the material and the buyer's processing system.

COMMERCIAL INDICATION

Delivery basis, freight, packaging, available quantity, payment terms and offer validity: to be confirmed in the quotation.

EVALUATE THE OPPORTUNITY FOR YOUR PROCESSING LINE

Assess the material using your recovery rates, recovered-metal selling prices, processing costs, freight and residue management costs. Contact Menegatti Industries to discuss technical suitability, supporting information and arrangements for representative sampling or a trial lot.
